Nucleic acid encoding antigenic peptide(s) from Streptococcus pneumoniae - or their epitope-containing fragments, useful in protective or therapeutic vaccines, and for diagnosis

Claim 11; Page 48; 118pp; English.

The present sequence represents a protein from Streptococcus pneumoniae. The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, orally or through the skin, typically at 0.01-1000

Wild type PBP is a bifunctional protein, which binds the cell membrane when expressed in a bacterial cell, having transplycosylase and transpeptidase activities. The variant protein (NCIMH 40655) in conjunction with a labelled anti-bifunctional PBP monoclonal antibody, can be used to identify and assay for cpds. which bind bifunctional PBP. Such cpds., as inhibitors of bifunctional PBP have a potential use in therapeutic cpds. which inhibit the growth of antibiotic resistant bacteria. The soluble variant may also be used in X-ray
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sol. derivs. of bifunctional penicillin binding opt. lack transglycosylase activity, useful to i for antibodies or cpds. which bind BPBPs
                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              맑
                                               The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the CC genes, their use in the discovery of novel antiblotics, the essential CC genes themselves and the encoded proteins. The prokaryotes used are CC Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets CC for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, CC and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in CC essential prokaryotic cellular proliferation protein.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21-MAR-2000;

Other export proteins include plpA (see AAR70152), expl, exp3, and padl (encoded by the sequence shown in AA033259). This sequence can be inserted into an expression vector (preferrably a bacterial expression vector) to provide for high levels of expression of the protein. The protein can then be used in the production of an acellular vaccine. These vaccines are used to provide protection from Gram positive bacterial infection. Antibodies against export proteins can be used for diagnosis of infection and in passive immune therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents exp2. The DNA encoding this sequence is identical to that for ponA which encodes penicillin-binding protein (PBPIa). This sequence is involved in adhesion of bacteria to targe cells. This sequence is an exported protein of S.pneumoniae. Expor proteins are the proteins in pathogenic bacteria that are virulence
                                                                                                                                                     05-AUG-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             transpeptidase encoding re detection; identification;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Streptococcus

The products and methods can be used for detecting s. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and identifying any antibiotic-resistant s. pneumoniae strains in a sample. The methods can be used for detecting S. pneumoniae strains resistant to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. The assays can be used to detect other pathogens causing meningitis. The assays can be used to detect an antibiotic resistant strain of s. pneumoniae with a minimum inhibitory concentration (MIC) of 0.25-1 micro g/ml where the PCR products detected are a 1043 bp and 24 bp product. The present sequence represents a Streptococcus pneumoniae pbp1A transpeptidase encoding region (TER) isolate protein concentration (TER) isolate protein

                                                                                                                                                                                                                                     밁
                                                                                                                                   Qy
                                                                                                                                                                                                                                                                     The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the CC genes, their use in the discovery of novel antibiotics, the essential CC genes themselves and the encoded proteins. The prokaryotes used are CC Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used CC to identify proteins used in proliferation, to express these proteins, CC and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery CC programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in CC a wide variety of organisms. The present sequence represents an CC essential prokaryotic cellular proliferation protein.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic for mat directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel isolated Streptococcus pneumoniae polynucleotides (see AAZ96173-Z96494) and their encoded proteins (see AAZ965792-Y86182). The DNA, vectors and host cells described in the method of the invention are useful for the recombinant expression of the polypeptides. The polypeptides are useful for treatment or prevention of disease, or diagnosis of disease related to expression or activity of such a polypeptide. They can also be used to screen for compounds which interact with and inhibit or activate such a polypeptide. The polypeptides (or DNA encoding them, via gene therapy) are also useful for inducing an immunological response in a mammal. The antagonists are useful to inhibit such bacterial polypeptides. The polypeptides are particularly useful to identify antimicrobial compounds and antibiotics.
Streptococcus pneumoniae

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   compositions comprising the proteins are useful as vaccines and also in diagnostic assays. The sequences are useful for the detection or diagnostic assays. The sequences are useful for the detection or diagnostic of S. pneumoniae infection, by contacting a sample to be tested with them. Agents capable of antagonising, inhibiting or interfering with the function or expression of the protein or polypeptide are useful in medical compositions in the treatment or prophylaxis of S. pneumoniae infection. As the sequences can be used to treat S. pneumoniae infection, they can be used to treat bacterial pneumonia, which has high rates in young children, the elderly, and in patients with predisposing conditions such as asplenia, heart, lung and kidney disease, diabetes, alcoholism, or with immunosuppressive disorders, especially AIDS. They can also be used to treat pneumococcal septicaemia, otitis media, sinusitis, and

Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific monitoring infections. Antibodies which bind the protein are used to detect specific antibodies in standard immunoassays, especially for diagnosing or their content corresponding antipodies which bind the protein are used to detect specific antipodies. Antibodies which bind the protein are used to detect corresponding antipodies which bind the protein are used to detect the content of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid encoding antigenic peptide(s) from Streptococcus pneumoniae - or their epitope-containing fragments, useful in protective or therapeutic vaccines, and for diagnosis

The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL161840-ABL16175) and the encoded proteins The sequence 3.4--
The invention provides novel isolated polypeptides comprising the amino acid sequence of an N-terminal choline binding protein A (CbpA) truncate (CbpAY). The polypeptides can be selected from sequences shown in AAY49225, AAY49227, AAY49230, AAY49231, AAY49233 and AAY49238. The polypeptides can be used for inducing an immune response in a subject which has been exposed to or infected with a pneumococcal bacterium. The can also be used for preventing infection by a pneumococcal bacterium. Vaccines comprising the polypeptides or encoding nucleic acids can be
                                                                                                       Novel polypeptides, used to develop products for the prevention and treatment of pneumococcal infections
                                                                                                                                                                                                                                                                                           Streptococcus
                                                                                                                                                                                                                                                                                                               Choline binding protein A; CbpA; pneumococcal bacterium; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
